Project Design Phase
Proposed Solution Template

Date	14 October 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template:

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Enterprise network requests are handled manually via emails and phone calls, causing lost data, delayed manager approvals, zero fulfillment tracking, and non-compliance with ITIL standards.
2	Idea / Solution description	Design and configure an automated Network Request Management System using ServiceNow Service Catalog, Flow Designer orchestration, custom table persistence (u_database_table1), approval routing, and catalog task fulfillment.
3	Novelty / Uniqueness	Zero-code flow orchestration, dynamic UI policy conditional toggles, relational approval mapping via sys_relationship, and multi-stage automated HTML email alerts with deep links.
4	Target Beneficiaries	Enterprise employees (rapid self-service ordering), IT managers (actionable approval records), network engineers (automated task dispatch), and IT auditors (complete lifecycle history).
5	Technology Stack	ServiceNow PDI (dev251577), Service Catalog ('Network Request1'), Flow Designer, Database Table1 (u_database_table1), sysapproval_approver, and sys_email.
6	Key Performance Indicators (KPIs)	100% input completeness, approval turnaround time reduced from days to <2 hours, flow actions execute in <500ms, and 100% audit logging in u_database_table1.
7	Implementation Feasibility	Fully configured, demonstrated, and verified on ServiceNow cloud instance without requiring external servers or third-party hardware plugins.
